

ENGINEERING SERVICES – PACKAGE DESIGN

Tech Transfer is capable of full Reciprocating Package Design and Analysis services. Our engineers and design staff have extensive backgrounds with compressor manufacturers, compressor packagers and operators. We can complete your package design from equipment sizing and selection through fabrication drawings.

Tech Transfer's 20 year background in field vibration analysis has given us a vast amount of exposure to package design problems. Tech Transfer's expertise in package structural design and acoustical pulsation analysis has given us the ability to prevent pulsation and vibration problems during the design stages.

Tech Transfer has been an integral part of the package design for the largest separable, reciprocating compressors in the following installations: pipelines, fixed offshore platforms, floating offshore platforms and FPSOs.
